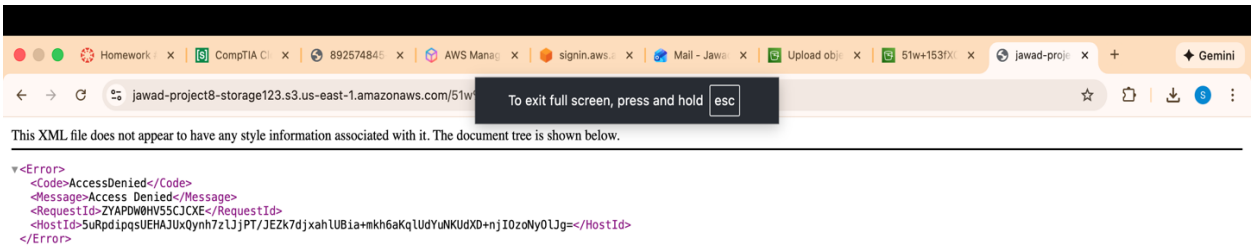
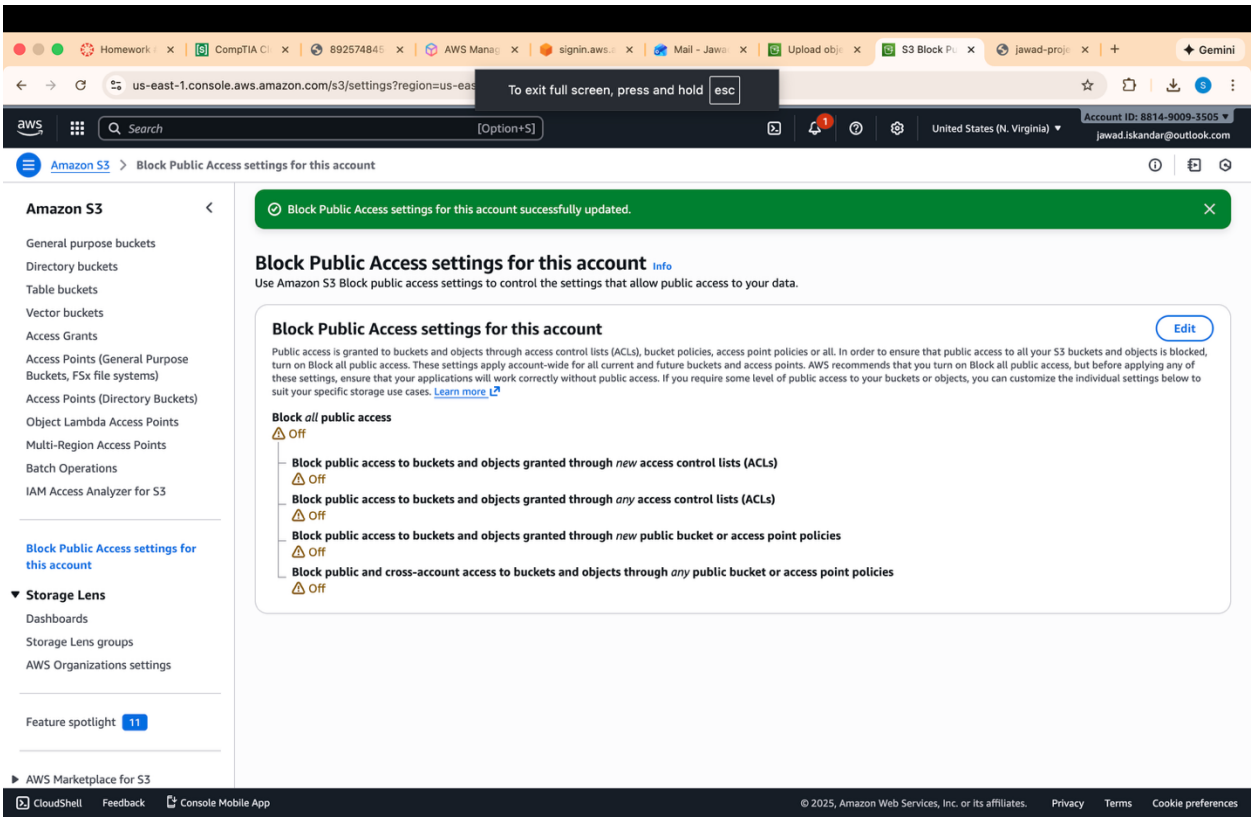
Step 6: I uploaded the Jpg file, then took the Object Url and inserted it into a different Url and found that the access was denied - Access Denied — object is not publicly accessible because public access is blocked.



Step 7: I have unchecked the Boxes for public access and granted it for public access



Step 8: The access is still being denied since I need to adjust the Properties Tab

Step 9 : We have adjusted the Policies and have made sure that we will be able to access the Image by putting in these parameters

Amazon S3 > Buckets > jawad-project8-storage123

Successfully edited bucket policy.

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. Learn more

**Block *all* public access**

Off

▶ **Individual Block Public Access settings for this bucket**

## Bucket policy

Edit | Delete

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. Learn more
